- Screens displayed with your institute's logo/banner, enhancing your institute's online visibility. Refer the sample image shown above
- Hosted in India's best data center for 24 x 7, 365 days un-interrupted and secured access

e-Campus   *The Anytime Anywhere software solution for Educational Institutions*

e-Campus includes modules and functionality to cover all complex operations within the Institution covering Students, Staff, Academic, Library and Accounting functions.

e-Campus is a Web centric application which allows you to work from multiple locations and carry out your instiute's operations in real time with great efficiency from any part of the world with just an internet connection (**a DSL connection or even a wireless connection from your laptop !**). The possibilities are unlimited.

Hosted model. The software is hosted by us and ready to use in one of the best data center where 100s of other servers of multinationals and other indian corporates are maintained. No installation, no buying servers and other equipments.

Advantages of hosted model

Lower total cost of ownership– There is no up-front investment for buying the software. You can start using the software at a very low cost whether you have just one branch operation or multi branch operations.

Minimal IT maintenance – Apart from a local network with internet access you do not require anything else to use e-Campus.

Predictable IT costs - Because the user pays only for what they use, IT costs are predictable

Quick start – All you need is an internet connection to start using e-Campus.

Easy upgrade – You may upgrade from the rental scheme and buy the software from us.

e-Campus Features

| General Features	Benefits
Web Centric software	There is no need of installing the software on each PC, all you need is a PC with a browser such as Internet Explorer or Firefox to use the software. The software is installed in a reputed data center and ready for use. You need not make huge investment in Hardware or software required to run the application. No worry about updating the software, protecting it from virus attacks. Overall IT resources required is minimal.
24 x 7 access from Anywhere for staff and teachers in a highly secured environment.	The software can be used from anywhere with a Computer having an internet connection. - For example :- Teachers can update subject marks for an examination from their home instead of doing it from the school. - Management wants to review the progress of various activities of school, but the management office is geographically separate, so they can login into the system from their own premises and do the review. **It benefits all type users** - **Top Management** : Management can have easy access to institute's overall performance anytime of the day, from any place, they need not visit the school. Any number of institutes can be managed within a single login. - **Teachers** : Teachers can concentrate on teaching during class hours and evaluate students data on their performance, attendance during off hours or even from home
Economical and risk free	You need not invest in Servers or Database or other hardware or software which are required to install the application or its maintenance. We provide all these including data backups. You just pay a monthly rental for using the software and no risk at all as you are not making any up-front heavy investment for either the software or hardware. The *Rental Charges* are based on number of students enrolled.

General Features contd...	Benefits
Your **institute logo** displayed on all important screens	User can easily identify it as your software application. Refer the images shown on 1st and 2nd page of this document.
In addition to Staff/Teacher access, separate **access to Students** and Parents possible. Parents or Students can have access to their own academic data.	Students can view their attendance, marks, fee status, transporting needs etc using internet. They cannot access other than their own data. The staff login and Students login are kept separate to avoid unwanted access. It is as good as two different applications.

Functional features	Benefits
Student information including their personal details including photo, height, weight, blood group, special needs,Parent's and guardian details, Transport details, hostel details etc are maintained.	Makes it efficient for management to interact with students and parents based on need.
Student Performance management:- Attendance, Examination marks and Assessment marks/grades, Teachers comments on performance. Student's data from the year of enrollment to the school to their year of leaving is maintained	All data related to marks, attendance etc can be viewed in an easy to understand format and thus effectively monitoring students overall performance throughout the academic year.
Course details such as Course subjects, its Syllabus, Syllabus coverage etc	All course related informations available instantaneously for students, parents and teachers
Fee management	Fee collection monitoring becomes an easy task. System at any time can tell you the fee payment status of each and every student
Class time table and teacher time table	Class time table and teacher's time table are maintained, if a particular teacher is absent, system can immediately help to identify substitution teachers
Staff Information, Personal data, attendance and Leave management	Complete information about staff and their performance

Functional Features contd...	Benefits
Accounts module. All accounting features including Jvs, Payments and Receipt Vouchers, Bank reconciliations, Budgeting and Reports such as General Ledger, Profit and Loss statement and Balance sheet, Trial balance etc.	Track efficiently the finances of the institution.
e-Diary and e-messaging to interact with parents	Interaction between parents and teachers becomes instantaneous and effective as the messages are alerted through emails and SMS services
Electronic Bulletin board – MS office documents or PDF documents can be attached.	Electronic bulletin board for teachers/staff. For example, the entire HR Policy of the institute can be maintained within the bulletin board so that new teachers comes to know the policies through the system. Documents are shown on the main board only during its scheduled display period, once that is expired, it is archived. Notices are displayed only after login.
Multiple institution	If you have more than one institute under your management, and you are part of the group's management team,you can manage all your institute from single login.

Security features and Privacy	
Login is encrypted with 128 bit SSL encryption. 	This is as good as your internet bank account. The user id, password etc are transmitted in an encrypted form.
Access restrictions based on physical location of a person's login – You can decide a staff/teacher can access the software from their home or they can access the application only from school.	For example, some staff members can be given access only from school premises while other can be given access to the application from their home as well as school premises.
Individual access rights : Possible to provide access to only concerned functions. A user can access only his or her related department's information.	For example, Mathematics teacher of Class 5 can access only the details about that subject. But the class teacher can be given access to details about all subjects of the student.

Security Features contd...	Benefits
Firewall : The server is hosted in a very reputed data center protected with Firewall.	Highly secured environment which prevents un-authorized entry to the server.
Anti-virus software updated regularly on server	Protects the server from virus infection.
Complete **audit trail** of changes	Any information changed in the system is tracked. The user who has done the change, change made and date and time are logged.
Exclusive database for your institute	Unlike other on-line hosted softwares, your institute's data is kept in an exclusive database, it is not shared with any other institute. Thus privacy of the data is maintained.
Technical	You need not worry about technical details about the software as *NeoSoft* is managing it for you. But in case you would like to have the software and manage it yourself anytime in future, these details will help you.
Database : Supports all popular databases such as MySql, MS Sql, Oracle etc	You have the freedom of choosing the right database for your environment based on your requirement or corporate policy.
Developed using **J2EE**	The software is developed using Java, the most popular open technology. This makes it possible to implement the software on diverse operating systems and host it using your preferred third party web server software.

In case you want the software to be managed by your own IT team in future, you have the option of buying the software from us and managing it yourself. *NeoSoft* can install the software and database in your premises within few hours of your purchase of the software. Or you want to purchase the software, but still want us to manage it in our data center, a back up copy can be installed in your premises and data can be updated periodically from the data center.

About us : *NeoSoft* specializes in the design and development of enterprise application software solutions, mainly in the areas of Logistics, Manufacturing and Education.
